

(Android Only) On the device connected to the door strike be sure to enable "Open Relay via HTTP" under **Phone > Relay**

Open Relay via HTTP

Status: Enabled

UserName: admin

Password: *****

(Android Only) Under **Phone > Call Feature**, put in the IP of the doorbell (or your computer if you are sending the command to test from there) under Allowed Access IP List. Any additional IP address that will be sending the web request, should be added, and separated with a comma and no extra spaces.

Remote Control

Allowed Access IP List: 192.168.7.200,otherIP

For ALL Indoor Monitors, under **Phone > Relay**, For Softkey in Talking Page, Enable Remote Relay DTMF1 (this should be # by default)

On the indoor monitor under **Phone > Relay**, use the following URL under HTTP Unlock, and use the IP address of your doorbell under IP, with the username admin and password admin as a default setting.

On the doorbell, Under **Phone > Action URL** or **Setting > Action URL**, set to Both and put full unlock command as follows with the indoor monitors IP in place of "ipaddress" under "Relay A Triggered":

<http://ipaddress/fcgi/do?action=OpenDoor&UserName=admin&Password=admin&DoorNum=0>

On the doorbell, make sure you enable the DTMF using the # tone, since this is the default setting for the indoor devices.
